

Get Aqua Wise™!

- Do you have turf that needs to be renovated or overseeded as a result of the CA drought?
- Are you looking to reduce water by up to 30% while keeping turf green?
- Will you support the practice of water conservation?

If you answer yes to any of the questions above you might consider using turf varieties that are part of our new **Aqua Wise™** program and approved and supported by the TWCA (Turfgrass Water Conservation Alliance).

New Aqua Wise™ Fescue Blend

Tall fescue has become the go to cool-season turf for many applications in CA such as parks, passive turf areas, and home lawns. Using TWCA qualified grasses have been proven in independent testing to reduce outdoor water usage by up to 50%. This significant reduction can make you feel confident that your choice is making a meaningful difference. Pacific Coast Seed's new **Aqua Wise™** Fescue Blend is a 3-way blend of TWCA approved tall fescue varieties (Rambler, 2nd Millennium, and Aquavita).

In addition to the **Aqua Wise™** Fescue Blend we also carry several other drought tolerant turf grass varieties that are qualified for TWCA certification. Below is a list of the other TWCA varieties that we currently stock. We can customize a drought tolerant turf mix to meet any requested formulation with any of these varieties in addition to the tall fescue varieties noted above.

- Manhattan 5 GLR Perennial Ryegrass
- Celestial Creeping Red Fescue
- Bedazzled Kentucky Bluegrass

TWCA is a non-profit alliance of industry partners dedicated to the principles of water conservation. With a science based approach, via drought tolerant selective breeding programs, TWCA qualifies only cultivars that have significant water savings. You can learn more about TWCA at www.tgwca.org.
